**Approval of thesis for defense result**

I hereby confirm that the changes required by the examiners have been carried out and incorporated in the final thesis.

Name of Student Hiwot Ahmed Said Signature  Date 05/08/2020

As members of the board of examiners, we examined this thesis entitled "Dietary Diversity and Associated Factors among HIV Positive Adults Attending Antiretroviral Therapy Clinic at Felege Hiwot Comprehensive Referral Hospital, Northwest, Ethiopia" by Hiwot Ahmed Said. We hereby certify that the thesis is accepted for fulfilling the requirements for the award of the degree of Masters of Science in Applied Human Nutrition.

## **ACKNOWLEDGMENT**

I deeply appreciate my advisor Mr. Gebeyehu Tsega for his continuous advice & support while conducting this research.

And, I would like to thank Felege-Hiwot Comprehensive Referral Hospital ART Clinic staff, data collectors and supervisor for their support for the successful data collection.

Finally, I would like to extend my gratitude for Bahir Dar University, Institute of Technology, Faculty of Chemical & Food Engineering, Department of Applied Human Nutrition, and participants of this study.

## ABSTRACT

**Background:** Dietary diversity is the consumption of variety of food items over a reference time. It is one of the important indicators to assess the nutrient adequacy and diversity of diet. However, little is known about dietary diversity among adult HIV patients in Bahir Dar.

**Objective:** To assess dietary diversity and associated factors among HIV positive adults attending Antiretroviral Therapy Clinic at Felege Hiwot Comprehensive Referral Hospital, in Northwest Ethiopia.

**Method:** An institution based cross-sectional study conducted in Felege Hiwot Comprehensive Referral Hospital in 2019. Systematic random sampling technique employed to select 352 study subjects. Data collected using an interviewer administered questionnaire & chart review. SPSS version 26 used for analysis. The data were summarized with descriptive measures, simple and multivariable binary logistic regression used to determine associated factors.

**Results:** Two hundred nine (59.4%) adults had consumed a diversified diet. The mean individual dietary diversity score was  $3.86 \pm 1.18$ . Self-employment status (AOR: 4.60; 95% CI: 1.72-12.27) compared to unemployed, quintiles of wealth index; [the second (AOR: 4.33; 95% CI:1.72-10.89), middle (AOR: 4.40; 95% CI: 1.71-11.31), fourth (AOR: 6.60; 95% CI: 2.36-18.48) and highest quintile (AOR: 9.45; 95% CI: 3.34-26.77)] in reference to lowest quintile, last CD4 count 200-349cells/mm<sup>3</sup> (AOR: 8.08; 95% CI: 2.93-22.23) compared to CD4 count < 200cells/mm<sup>3</sup>, taking first line ART regimen drugs (AOR: 4.49 ; 95% CI: 2.19-9.21) relative to second line, subjects who were not taking cotrimoxazole prophylaxis (AOR: 6.36; 95% CI: 2.54-15.88), ever had nutritional counseling at health institution (AOR: 2.36; 95% CI: 1.08-5.16), having no food preference (AOR: 2.42; 95% CI: 1.14-5.13), and a food secure household (AOR: 3.51; 95% CI: (1.85-6.67)] were associated factors of dietary diversity among adults on ART.

**Conclusion:** This study dietary diversity status is unsatisfactory among adult attending ART clinic. Health institution and health professionals working at ART clinic shall strengthened their efforts to sustain the nutritional counseling service and ART adherence at health institution and encourage the patients to avoid food preference for their meal. It is vital to ensure household food security of adults on ART.

**Key Words:** Dietary diversity, HIV Positive Adults

# INTRODUCTION

## 1.1. Background

Dietary diversity (DD) is the number of individual food items or food groups consumed over a given reference period of time (Ruel, 2018). To guarantee adequate intake of essential nutrients and promote good health, dietary diversity is thought to be very important and no single food can contain all nutrients. The more different food types are included in the daily diet, the greater the probability of meeting nutrient requirements (Labadarios et al., 2011). People with low income, usually living in developing countries, are more prevalent to chronic diseases as a result of the malnutrition due to poor dietary diversity (Ruel, 2018). It is eating different food types across and within food groups like vegetables, fruits, grains, and animal source foods (Tesfaw et al., 2018).

Adequate nutrient intake which is necessary for good nutrition has often been associated with food variety and diet quality of individuals. Micronutrient malnutrition is one form of malnutrition affecting lives of millions of people worldwide (Bandoh & Kenu, 2017) (Chagomoka et al., 2016). Micronutrient malnutrition remains a major public health concern in developing countries due to intake of monotonous, predominantly starchy based diets that are lacking in diversity (FAO, 2010) and hence, over 2 billion people are affected worldwide (Chagomoka et al., 2016).

Although Anti-retro viral therapy (ART) medication related side effects like poor appetite, fatigue, and nausea make HIV infected individual hard to eat well, the nutritional needs of people with HIV are greater because the body has to work overtime to deal with a chronic viral infection and to fight against opportunistic infections (Lyon & Nambiar, 2000). For healthy, strong, productive life good nutrition has a paramount importance. It has been indicated that diversified diet as indicator of quality food. The dietary diversity score at the individual level is a proxy indicator of adequate intake of energy and micronutrients (UN, 2008) which implies that increasing the diversity of foods and food groups in the diet helps to ensure adequate intake of essential nutrients, and promotes good health (Kennedy et al., 2009).

## **1.2. Statement of the problem**

HIV is one of the most serious global public health challenges. In 2017, 36.9 million people are living with HIV/AIDS worldwide (1.8 million were children <15 years old). Among these 59% (21.7 million) were accessing antiretroviral therapy (ART) globally. Nutrition care and support is one of the components of comprehensive care for people living with HIV (Weldegebreal et al., 2018) since more than half of people living with HIV are in low- and middle-income countries; 19.6 million (53%) in eastern and southern Africa, 6.1 million (16%) in western and central Africa, 5.2 million (14%) in Asia and the Pacific, and 2.2 million (6%) in Western and Central Europe and North America (McGovern, 2010). In Ethiopia, the prevalence of HIV is 1.15% [1.4% urban and 0.6% rural prevalence] PLWA 737,186. And in Amhara PLWA 210,410 (EPHI, 2017).

Dietary diversity is recommended for healthy life and is an important component of diet quality (Martin-Prevel et al., 2017). Globally, in the last half century the food diversity consumed around the world deteriorated (Khoury et al., 2014) and repetitive/monotonous low-quality diets are custom in resource-limited countries (Mekuria et al., 2017).

Dietary diversity is very important to help people living with HIV/AIDS prevent weight loss or maintain weight, maintain muscle mass, boost immunity and to prevent from viral progression and opportunistic infection (World Bank, 2007).

In Ethiopia, several studies have been carried out focusing on women & children nutrition (Eshete et al., 2018; Temesgen, Negesse, et al., 2018; Temesgen, Yeneabat, et al., 2018; Weldehaweria et al., 2016; Yimer & Tadesse, 2016), yet, dietary diversity in vulnerable groups like people with HIV/AIDS is limited. Besides, to the best of my knowledge (the investigator) little is investigated about dietary diversity of people living with HIV and associated factors in Ethiopia particularly in Amhara region and Bahir Dar City.

Therefore, this study proposed to assess dietary diversity and associated factors among HIV positive adults attending ART clinic at Felege Hiwot Comprehensive Referral hospital, Bahir Dar in Northwest Ethiopia.

### **1.3. Rationale of the study**

Nutrition and HIV have an intricate relationship. HIV is known to lead for an extensive immune suppression, and further deteriorating of nutritional status in an infected individual, which in turn worsens the cripple down of immune and escalate HIV. Hence, a person with poor dietary diversity after acquiring HIV is likely to show rapid progress to AIDS (Duggal et al., 2012). Hence, the importance of nutrition for HIV/AIDS patients is paramount to help them boost their immunity. However, studies that focus particularly on dietary diversity of HIV positive adults on ART are few. Therefore, I have proposed to conduct this research with the addition of variables (i.e., food preference and ART regimen category) which were not covered by previous researchers.

### **1.4. Objectives**

#### **General objective**

To assess dietary diversity and associated factors among HIV positive adults attending antiretroviral therapy (ART) clinic at Felege Hiwot Comprehensive Referral hospital, in Northwest Ethiopia.

#### **Specific objectives**

- To determine the level of dietary diversity among HIV positive adults attending ART clinic at Felege Hiwot Comprehensive Referral hospital, in Northwest Ethiopia, 2019.
- To identify predictors of dietary diversity among HIV positive adults attending ART clinic at Felege Hiwot Comprehensive Referral hospital, in Northwest Ethiopia, 2019.

### **1.5. Scope of the study**

This research focus on adults who age between 18 to 65 years old and attending at ART clinic. And its scope limited to the assessment of magnitude of dietary diversity and its determinant in Felege Hiwot Comprehensive Referral Hospital ART clinic.

### **1.6. Significance of the study**

This research will give an evidence on dietary diversity and selected factors among HIV positive adults attending Felege Hiwot Comprehensive Referral Hospital (FHCRH) ART clinic. Establishing factors associated with dietary diversity is crucial to identify and define the intervention areas for the target groups, ART attendants, so as to ultimately enhance nutrient intake. Hence, it is a vital input for different stake holders; such as health care professionals working in HIV/AIDS care, health facilities, regional health bureau and nutrition related program designers at different level including ministry of health and researchers who are working so as improve quality of life and better survival in HIV-infected patients.

## **2. LITERATURE REVIEW**

### **2.1. Magnitude/level of dietary diversity**

Regarding magnitude of dietary diversity some institution-based cross-sectional studies in East Africa had shown a wide variation in the level of dietary diversity among adults on ART follow-up. For instance, a cross sectional study on dietary intake and dietary diversity score of adults living with HIV/AIDS in Kenya presented 62.7% of respondents had high dietary diversity and mean dietary diversity score was 4.99 (SD 1.37) (Beatrice et al., 2018).

In Ethiopia, low magnitude in dietary diversity had been shown in Northwest Ethiopia studies, i.e., in Metam hospital study it was 41.2% (Woldemariam et al., 2015) and in Motta Town public health facilities only 29.5% of HIV positive adults consumed diversified diet with the mean  $\pm$  SD dietary diversity score of  $3.2 \pm 1.88$ . Besides starchy staples (96.1%), followed by legumes (81.7%) were largely consumed whereas, organ meats (4.6%) were least consumed food groups by study subjects (Tesfaw et al., 2018). While higher dietary diversity was shown by Fitsum Weldegebreal and his colleagues' study in Eastern Ethiopia at Hiwot Fana and Dilchora Hospitals that indicated 71.3% had consumed high dietary diversity (Weldegebreal et al., 2018).

### **2.2. Factors associated with dietary diversity**

#### **2.2.1. Sociodemographic factors**

Concerning socio-demographic factors studies has shown that sex (males had higher DD), household wealth quintile (higher wealth index tends to have high dietary diversity) (Codjoe et al., 2016), household size, and gender affect dietary diversity (Powell et al., 2017). Besides purchase of main source of food was a factor for adults to have low dietary diversity (Beatrice et al., 2018).

Besides, Amare Tariku and his colleagues study revealed being self-employed (having their own work) and daily laborer found to be a significant factors for dietary diversity among adults on ART (Woldemariam et al., 2015).

### **2.2.2. Behavioral factors**

Alcoholism has a considerable effect on appetite, food choices and eating habits. Its' impact range from choice of unhealthy food (fatty foods) which predispose to obesity(Kruger & Kruger, 2015) to inability to appreciate hunger feeling which leads to malnutrition (Friedman et al., 1989). Studies has revealed that smoking (Gregersen et al., 2011) and Khat chewing (Ageely, 2008) reduced appetite which in turn affects dietary intake. Moreover, adults who had media exposure had a better dietary diversity than who did not had (Tesfaw et al., 2018).

### **2.2.3. Health related factors**

Having more than 2 years duration of antiretroviral treatment had associated with high dietary diversity (Weldegebreal et al., 2018). While, adults on ART with shorter duration of anti-retroviral treatment (<18months) and taking Cotrimoxazole prophylaxis found to have a contribution for low dietary diversity (Woldemariam et al., 2015).

### **2.2.4. Nutritional related factors**

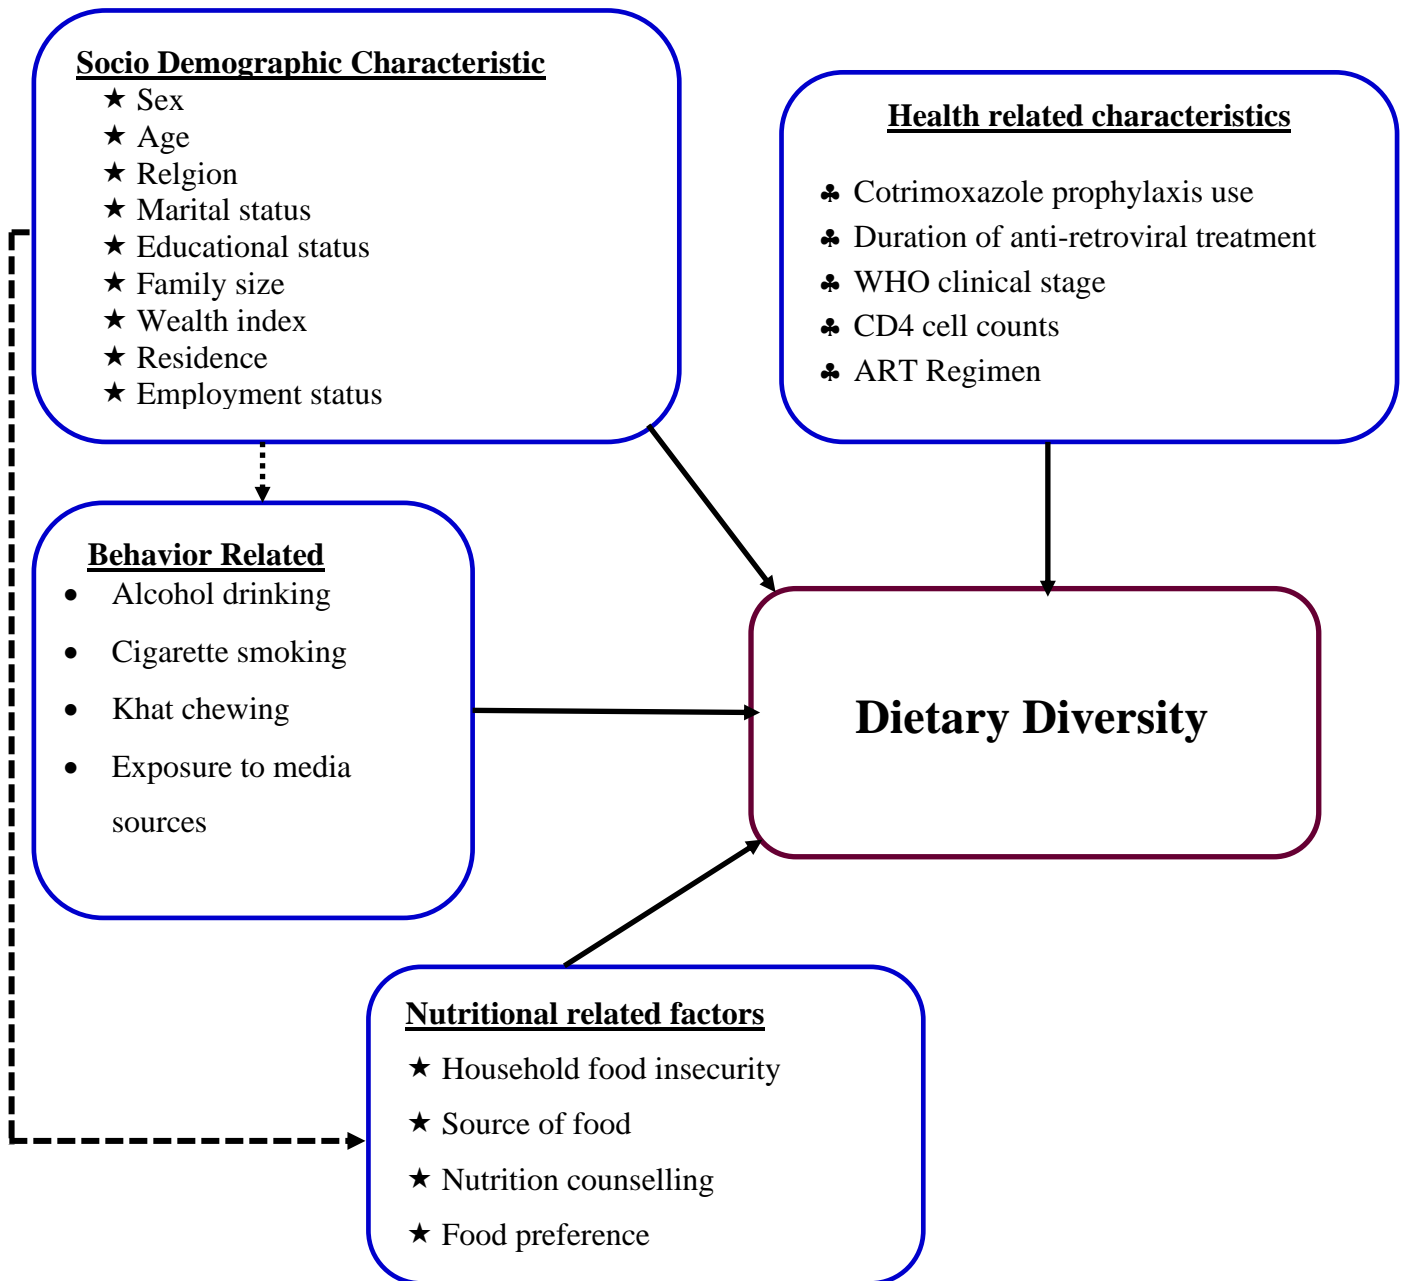

Ethiopia has high levels of chronic food insecurity and is further prone to acute food insecurity, primarily during times of drought, environmental degradation, and insufficient access to and availability of food. As a result, the country has one of the world's highest incidences of under nutrition (EFDR MOH, 2008). Food insecurity and poor nutritional status may hasten progression to acquired immuno-deficiency syndrome (AIDS)-related illnesses, undermine adherence and response to antiretroviral therapy, and exacerbate socioeconomic impacts of the virus (Tiyou et al., 2012).

Moreover, HIV infected person may be exposed to malnutrition due to different factors. One of the factors responsible for malnutrition in an HIV-infected person is reduced appetite, which could be due to difficulty in ingesting food as a result of infections like oral thrush or

oesophagitis caused by *Candida*, a common opportunistic infection in HIV-infected people and fever, side effects of medicines, or depression (Duggal et al., 2012). Increased energy needs as a result of virus replication and opportunistic infections, Poor absorption of nutrients that may be the result of recurrent or chronic diarrhea and HIV-caused intestinal cell damage, and changes in the way the body uses the nutrients it receives or has stored are other factors that increase the probability of HIV-infected person to become malnourished (EFDR MOH, 2008).

HIV, immune expression, and nutrition interactions are complex and related to each other and as a result, malnutrition adds fuel to the fire by accelerating the progress of HIV infection to AIDS (Duggal et al., 2012). Hence, it is very crucial to maintain adequate food consumption and nutrient intake levels and meet special nutritional needs in order to cope up with the disease and to achieve the full benefit of ART treatment (Tiyou et al., 2012). Moreover, food insecurity has been reported as the reason for the reduced food supply and intake in adults which there by affects dietary diversity (Coates et al., 2007). And nutrition counselling was a significant factors associated with dietary diversified feeding (Tesfaw et al., 2018).

## Conceptual framework of the study

**Figure 1. Conceptual Framework Developed based on literature review for Dietary Diversity and Associated Factors among HIV Positive Adults Attending Antiretroviral Therapy Clinics at Felege Hiwot Comprehensive Referral Hospitals, Northwest, Ethiopia**

## **3. METHODOLOGY**

### **3.1. Study area and period**

The study was conducted in Felege Hiwot Comprehensive Referral Hospital (FHCRH) ART Clinic which found in Bahir Dar city from October 06/2019 to November 15/ 2019.

Bahir Dar city is the capital city of Amhara National Regional state which is located 565 Km in Northwest of Addis Ababa, Ethiopia.

FHCRH, is a tertiary referral hospital with around 400 beds and 9 operating tables serving over 7 million people from the surrounding area. The hospital provides obstetrics, pediatrics, internal medicine, ophthalmology, general, gynecology, ENT (Ear, Nose and Throat) and orthopedic surgery services. FHCRH ART clinic began to serve since 2002. It has 42 staffs, five out-patient departments and 7,500 HIV/AIDS patients registered for ART clinic service.

### **3.2. Study design**

Institution based cross sectional study was conducted.

### **3.3. Population**

#### *Source population*

Source population was all HIV positive adults who are registered for care and support at FHCRH ART clinic.

#### *Study population*

All HIV positive adults who were attending ART clinic within the data collection period.

### **3.4. Sample size determination**

Sample size determined using a single population proportion formula with a 95% confidence level, 5% desired level of precision and considering proportion of adult HIV positive individuals attending public health facility in Motta town who consume diversified diet 29.5% (Tesfaw et al., 2018).

$$n = \frac{(Z_{\alpha/2})^2 p (1 - p)}{d^2} = \frac{(1.96)^2 * 0.295 (1 - 0.295)}{0.05^2} = 319.58 \approx n = 320$$

Z= the confidence limits of the survey result, P= the proportion of study population

d= the desired precision of the estimate, n= the total sample size.

Considering 10% non-response rate (320+32) the final sample size will be 352.

### **3.5. Sampling technique and procedures**

Study participants were selected by systematic random sampling technique at every K<sup>th</sup> (6<sup>th</sup>) intervals. Where k is sampling fraction; which is calculated as N/n=2,000/352≈6. The numerator 2,000 was estimated as average number of HIV positive clients attending ART clinic per month (100pts/day\*5days/week\*4weeks/month). The starting sample selected by lottery method among the first six clients chart. Then the procedure continued (selection of every 6<sup>th</sup> client as a study subject) until the required sample size obtained. In case of exclusion the next client was taken. Data collected in every working day except Thursday (to avoid Wednesday fasting influence for Orthodox follower) and one study subject recruited only once.

### **3.6. Inclusion and exclusion criteria**

#### *Inclusion criteria*

- ✓ HIV positive adults [age 18–65 years old] who were attending ART clinic within the data collection period

#### *Exclusion criteria*

HIV positive adults;

- ✓ Previously diagnosed diabetes mellitus, and/or hypertension and/or pregnancy.
- ✓ Those who participated in the special festival or special occasions away from home within the last 24-hours prior to data collection.
- ✓ Adult who took ART less than 3 months before the beginning of data collection.

### 3.7. Study variables

#### *Dependent variable*

- Dietary diversity [Low and high dietary diversity]

#### *Independent variables*

##### ✓ **Socio-demographic characteristics:**

- Sex, age, religion, current residence, educational status, marital status , employment status, family size, wealth-index quantile.

##### ✓ **Behavioral factors**

- Alcohol drinking, cigarette smoking, khat chewing, and exposure to media sources

##### ✓ **Health related characteristics**

- Cotrimoxazole prophylaxis use, duration of anti-retroviral treatment, CD4 cell count, ART Regimen category and WHO clinical stage.

##### ✓ **Nutritional related factor**

- Household food insecurity, Source of food, Nutrition counselling, and food preference.

### 3.8. Operational definitions

**Dietary diversity:** categorized in two broad categories low dietary diversity and high dietary diversity;

- ✓ **Low dietary diversity:** participants with Individual Dietary Diversity Score (IDDS) below the mean food groups considered as having low dietary diversity (Woldemariam et al., 2015).
- ✓ **High dietary diversity:** Mean individual dietary diversity score used as cut off point and those participants who consumed mean and above food groups within the last 24-hours considered as having high dietary diversity diet (diversified diet) (Woldemariam et al., 2015).

### 3.9. Data collection and quality assurance

**Data collection instrument:** Data were collected using a structured interviewer-administered questionnaire with chart review. Standardized individual dietary diversity score tool with 24-hours food recall method used to assess dietary diversity of HIV positive adults.

The questionnaire was adapted from (FANTA/FAO) and by reviewing literatures (Coates et al., 2007; FAO, 2010; Woldemariam et al., 2015). The questionnaire first prepared in English by reviewing literatures and then translated into Amharic then back to English to maintain its consistency, nutrition expert consulted for comment and pretest done.

The questionnaire has seven parts;

- ✓ Part-I: Questions on socio-demographic characteristics.
- ✓ Part-II: Behavioral factors
- ✓ Part III: Health related characteristics
- ✓ Part-IV: Nutritional related characteristics
- ✓ Part-V: Dietary diversity questions
- ✓ Part-VI: Household food insecurity
- ✓ Part-VII: Wealth Index

**Data collection personnel:** A total of six nurses recruited: five for data collection, one for supervision. They were trained and oriented for one day on the questionnaire and data collection.

Data on health-related characteristics such as duration on ART, Cotrimoxazole prophylaxis, last CD<sub>4</sub> count, WHO clinical stage and opportunistic infections were collected by reviewing patient clinical records & interview.

**Measurement of individual dietary diversity score (IDDS):** using the standardized IDDS tool, with a 24-hours food recall method (FAO) used to assess individual dietary diversity of study subjects (FAO, 2010; Woldemariam et al., 2015)

For estimation of individual dietary diversity score nine food groups consumed in the study area i.e., starch staples, dark green leafy vegetables, other vitamin-A rich fruits & vegetables,

other fruits & vegetables, meat &/ fish, organ meat, egg, legumes, nuts & seeds and milk & milk products.

Study subject were asked to list all foods he/she consumed at home and outside home in the last 24-hours prior to the data collection date from breakfast to dinner. Food eaten for breakfast 6:00 AM and 10:00 AM (12:00 - 4:00 morning local time) then lunch 12:00 PM-4:00 PM (6:00 noon to 10:00 after noon local time) and dinner 8:00 PM-12:00 AM (2:00 evening – 6:00 mid night local time) while snacks considered to be eaten before or after the major meal time. Then food eaten by the respondent classified into nine food groups.

If the respondent consumed food at least once during the last 24-hours within each subgroup 1 point scored and 0 point if they never consumed the food. Food groups an individual has consumed during the preceding 24-hours counted and IDDS calculated as the sum of food groups consumed over 24-hours.

**Data quality control:** The collected data reviewed and checked for completeness by the data collectors, supervisor and principal investigator. Data collectors given a training and the questionnaire translated and pretested. To assure anonymity, code numbers placed on the completed questionnaires after they return to the investigator.

### **3.10. Data management and analysis**

The data were cleaned and entered in to Epidata manager 4.6, exported and analyzed with SPSS version 26 software. The characteristics of the study subjects described by presenting on tables, means and standard deviations. The categorical variables presented in frequencies and proportions.

To determine the level of individual dietary diversity among HIV positive adults on ART, first individual Dietary Diversity Score (IDDS) calculated as the sum of food groups consumed over 24-hours. Then based on then mean of IDDS level of individual dietary diversity classified into low dietary diversity and high dietary diversity.

**Wealth Index:** Household's wealth status was assessed collecting data on variables related to ownership of livestock assets, crop produced in the previous year, possession of farm land, valuable domestic assets, living house condition, sanitation facility. For urban and rural

participants, the PCA run separately and finally wealth index score merged to a common variable (wealth index score). Then Wealth index score generated by using principal component analysis and the wealth index score categorized into five distinct wealth quintiles.

Household Food Insecurity Access Scale (HFIAS): Nine occurrence and frequency of occurrence questions/items of FANTA 2007 used to examine household food insecurity scale. The frequency of occurrence item recoded to '0' if the answer for occurrence item is 'No' and if 'Yes' it could be 1, 2, or 3. Thus, households will be grouped based on scores achieved in specific items. Based on the criteria; A food secure household experiences none of the food insecurity (access) conditions, or just experiences worry, but rarely. Hence, *food secure households* score item one (601.1) = '0' or '1' and item two (602.1) to nine (609.1) = '0' else recoded in to *Food insecure households* (Coates et al., 2007).

To identify predictors of dietary diversity status, the sum of individual dietary diversity score recoded as low dietary diversity (0) and high dietary diversity (1) by considering mean IDDS as cut off point ( $3.86 \pm 1.18$ ). Then bi-variable binary logistic regression analysis performed between dependent variable (dietary diversity status) and each of the potential factors to select candidate variables for multivariable analysis.

Predictor variables with p-value less than 0.20 in bi-variable binary logistic regression taken in to multivariable binary logistic regression analysis. P-values less than 0.05 considered statistically significant in the multivariable analysis. Predictor variables which had a significant association with dietary diversity status identified using adjusted odds ratio (AOR) with 95% CI and p-value less than 0.05. Hosmer and Lemeshow goodness of fit-test of model computed, p-value (0.21).

### **3.11. Ethical considerations**

Ethical clearance and approval letter to conduct study obtained from Bahir Dar University, Institute of Technology, Faculty of Chemical & Food Engineering, Department of Applied Human Nutrition to Amhara Public Health Institute. Amhara Public Health Institute had written ethical clearance for the conduct to FHCRH. Permission obtained from administrative body of FHCRH hospital. Finally, verbal consent obtained from the subjects included in the study immediately before the interview.

## 4. RESULTS AND DISCUSSION

### 4.1. Results

#### Socio-demographic and behavioral characteristics of study participants

A total of 352 of HIV positive adults (18–65 years old) attending antiretroviral therapy participated which makes 100% response rate. Majority of the participants were male 197 (56%), in the age group 35- 44 years 149 (42.3%), Orthodox religion followers 279 (79.3%), urban dwellers 300 (85.2%), secondary & above highest educational level achieved 202 (57.4%), married 229 (65.1%) and 211 (60.6%) lay in the middle and above quintiles of wealth index. Mean  $\pm$  standard deviation (SD) age of participants was  $36.9 \pm 8.2$  years old, mean family size was  $3.6 \pm 1.6$ . Among the study participants 41 (11.6%) smoke cigarettes, and 25(7.1%) chew khat (**Table 1**).

**Table 1. Socio-demographic characteristics of HIV positive adults (18–65 years old) attending antiretroviral therapy clinics in Felege Hiwot Comprehensive Referral Hospital, Northwest Ethiopia, 2019. (n=352)**

| Variables                             |                             | Frequency | %    |

## Measurements of 24 hours individual dietary diversity

More than half of study subjects 203 (57.7%) ate 3 times a day in the past 24 hours and near a third 115 (32.7%) ate 4 or more times in a day. The average meal frequency was  $3.2 \pm 0.8$  with a minimum of 1x & maximum of 6x a day.

Among nine food groups; starchy staple foods 333(94.5%), other fruits & vegetables 291(82.7%) and legumes, nuts and seeds 228(64.8%) were the most commonly eaten foods while organ meats were the least 28 (8.0%) food types eaten in 24 hours meals. Thirty-six (10.2%) participants mentioned they had eaten something (meal or snack) outside the home the day before interview. The mean individual dietary diversity score was  $3.86 \pm 1.18$  and minimum 1 and maximum 8 type of food eaten. (**Table 4**).

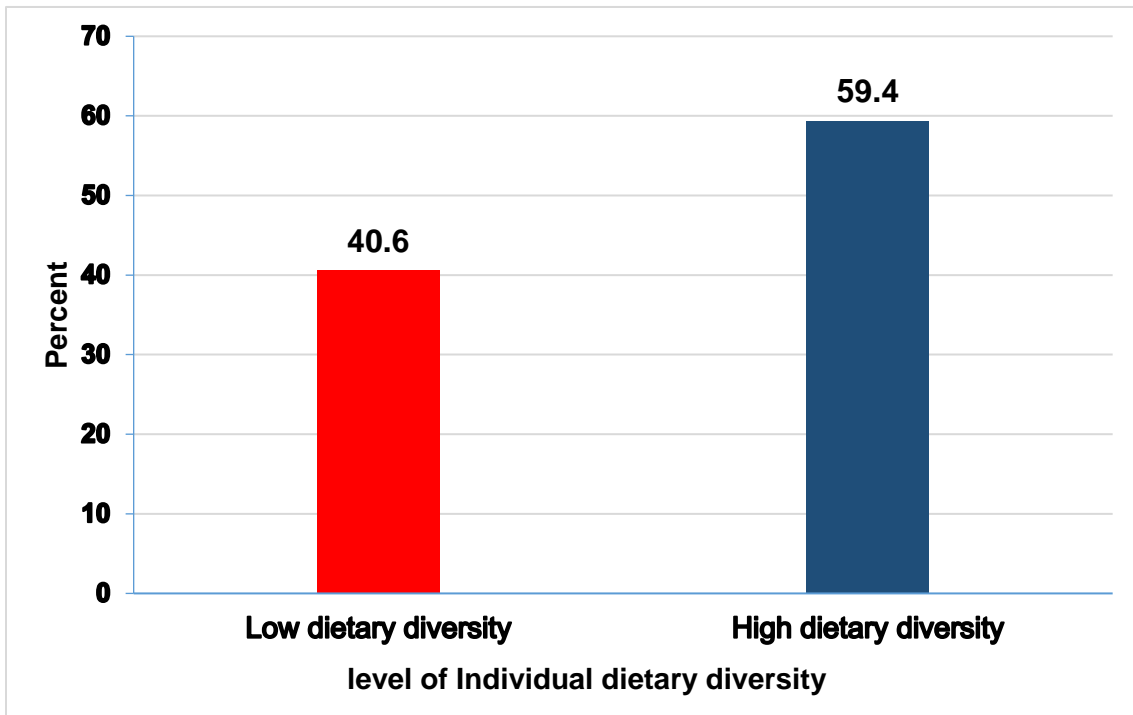

**Table 4. The 24 hours dietary diversity of HIV positive adults (18–65 years old) attending antiretroviral therapy clinics in Felege Hiwot Comprehensive Referral Hospital, Northwest Ethiopia, 2019 (n=352)**

| Food group   |     | Frequency | %    |

### Level of individual dietary diversity

The 24 hours individual dietary diversity score classified based on mean dietary diversity score ( $3.86 \pm 1.18$ ) in two low and high dietary diversity. Two hundred nine (59.4%) study subjects took more than the mean food category (high dietary diversity) (**Figure 2**).

**Figure 2 . Level of individual dietary diversity of HIV positive adults (18–65 years old) attending antiretroviral therapy clinics in Felege Hiwot Comprehensive Referral Hospital, Northwest Ethiopia, 2019 (n=352)**

## Household food insecurity

Adults on ART response for household food insecurity items were computed; the overall magnitude of household food insecurity was 134 (38.1%) and 218 (61.9%) were food secured. One hundred twenty-seven (36.1%) were mildly food insecure household, and 7 (2.0%) moderately food insecure. One hundred thirty-six (38.6%) of participants worried about household would not have enough food. Each of food insecurity items frequency presented on **Table 5**.

| Self or household member have eaten fewer meals in a day because there was not enough food                                      | 82         | 23.3       | 270     | 76.7      | 49  | 59.8 | 26  | 31.7 | 7  | 8.5   |
| There was ever no food to eat of any kind in the household because of lack of resources to get food                             | 46         | 13.1       | 306     | 86.9      | 30  | 65.2 | 12  | 26.1 | 4  | 8.7   |
| Self or household member go to sleep at night hungry because there was not enough food  | 37         | 10.5       | 315     | 89.5      | 25  | 67.6 | 9   | 24.3 | 3  | 8.1   |
| Self or household member go a whole day and night without eating anything because there was not enough food                     | 29         | 8.2        | 323     | 91.8      | 21  | 72.4 | 6   | 20.7 | 2  | 6.9   |

### **Factors associated with level of dietary diversity**

Candidate variables were fitted into multivariable binary logistic regression model (forward stepwise method); eight variables were found to be predictors of dietary diversity of HIV positive adults attending ART clinic.

Employment status; self-employed individuals had 4.60 more likely to take high diversified diet [AOR = 4.60 (95% CI: (1.72-12.27))] than that of unemployed adults on ART.

Quintiles of wealth index; were another predictor of individual dietary diversity; the second [AOR = 4.33 (95% CI: (1.72 -10.89))], middle [AOR = 4.40 (95% CI: (1.71-11.31))], fourth [AOR = 6.60 (95% CI: (2.36-18.48))] and in a highest quintile [AOR = 9.45 (95% CI: (3.34-26.77))] were more likely to have diversified diet than those individuals in lowest quintile.

Last CD4 count (cell/mm<sup>3</sup>); subjects with CD4 count 200-349cells/mm<sup>3</sup> were 8.08 more likely to diversify their food [AOR = 8.08 (95% CI: (2.93-22.23))] than those below 200 cells/mm<sup>3</sup>.

ART regimen category; Individuals taking first line ART regimen drugs had 4.49 more likely to diversify their food [AOR = 4.49 (95% CI: (2.19-9.21))] than those taking second line ART regimen drugs.

Cotrimoxazole prophylaxis: subjects who were not taking cotrimoxazole prophylaxis were 6.36 more likely to diversify their food [AOR = 6.36 (95% CI: (2.54-15.88))] than those who were taking cotrimoxazole.

Ever had nutritional counseling; subjects who ever had nutritional counseling at health institution were 2.36 more likely to diversify their food [AOR = 2.36 (95% CI: (1.08-5.16))] than their counter parts.

Having no food preferences: adult who had no food preference were 2.42 more likely to diversify their food [AOR = 2.42 (95% CI: (1.14-5.13))] than individuals having food preference to eat.

Household food insecurity; subjects who had food secured household were 3.51 more likely to diversify their food [AOR = 3.51 (95% CI: (1.85-6.67))] than their counter parts. (**Table 6**).

**Table 6. Bi-variate & Multivariable binary logistic regression analyses of variables with individual dietary diversity status among HIV positive adults (18–65 years old) attending antiretroviral therapy clinics in Felege Hiwot Comprehensive Referral Hospital, Northwest Ethiopia, 2019 (n=352).**

| Variable                  | Dietary diversity |      | Crude       |      |        | P-value | Adjusted    |      |       | P-value |
|---------------------------|-------------------|------|-------------|------|--------|---------|-------------|------|-------|---------|

Forward stepwise elimination binary logistic regression model was run adjusting for the variables significant at p-value < 0.20 in the unadjusted model (Bivariate) which included variables shown in this table.

OR: Odds Ratio, CI: Confidence Interval.

\* The reference category is low dietary diversity.

## 4.2. Discussion

Nearly six in ten (59.4%) study subjects had high dietary diversity (mean IDDS:  $3.86 \pm 1.18$ ). This was similar with a study done in Kenya (62.7%) (Beatrice et al., 2018). However, higher than a study done in Metema hospital (41.2%) and Motta Town Public Health Facilities (29.5% participants consumed diversified diet with mean IDDS:  $3.2 \pm 1.88$ ) (Tesfaw et al., 2018) and lower than a study done at Hiwot Fana and Dilchora Hospitals (71.3%) (Weldegebreal et al., 2018). This discrepancy might be due to variation in data collection periods i.e., in Motta and Metema the data collection period was April to May which is post-harvest time possibly food access will begin to decrease. While Hiwot Fana & Dilchora Hospitals data collection period was November to February which is harvesting time that will have a better food access. Moreover, geographical location and feeding habit variation between Eastern [Hiwot Fana & Dilchora Hospitals] and northern Ethiopia may be a potential reason for the discrepancy with this study.

The current study showed employment status had a significantly associated factor with dietary diversity. Self-employed adults (having their own work) on ART were more likely to have high dietary diversity than unemployed. This finding is supported by a study done by Amare and his colleagues in Metema hospital (Woldemariam et al., 2015) and Mukabana B. & Masika F. in Uasin Gishu District Hospital in Kenya (Beatrice et al., 2018).

With regarding to quintiles of wealth index which derived from household assets of study participants, a statistically significant associations were found between quintiles of wealth index and dietary diversity. From second to highest quintile there were an increase in the high dietary diversity compared to the lowest quintile. This would be credited to the fact that household assets have been associated and used as a proxy indicator of the socioeconomic status of a household that links to purchasing capacity of variety of foods and diversify food. This was in line with finding of Metema hospital study (Woldemariam et al., 2015). Besides, wealth also mentioned as a factor for increasing dietary diversity in a study done in Tanzania (Powell et al., 2017) and households in the richest wealth quintile had the highest dietary diversity in Ghana (Codjoe et al., 2016).

Another factor which was found to be associated with dietary diversity was last CD4 cells count. Subjects who had a CD4 cell counts 200-349 cells/mm<sup>3</sup> had a better dietary diversity than those who had a CD4 cell counts less than 200 cells/mm<sup>3</sup>. This is due to the fact that poor nutritional status particularly micro nutrients can leads to immunosuppression. This was similar with study done in Uganda which reveals consumption of diversified diet was positively associated with higher CD4 cell counts (Venter et al., 2009).

Moreover, adults who were taking first line ART had four times more likely to diversify their diet compared to those who were on second line ART. The possible reason would be first line ART drugs have less side effects such as lower gastro-intestinal upset which will have a contribution for better appetite, feeding and dietary diversity (WHO, 2006).

This study showed that adults who were not taking Cotrimoxazole prophylaxis were more likely to have high dietary diversity. The possible reason would be linked to Cotrimoxazole induced nausea and vomiting (Meyer, 1999) which potentially reduce appetite and there by dietary diversity affected. This finding was in line with Metam hospital study which indicated adults on Cotrimoxazole had more likely to have low dietary diversity than the counterpart (Woldemariam et al., 2015).

Besides, adult patients who ever had nutritional counseling at health institution found to have diversified diet than adults who did not get nutritional counseling. The possible reason would be health education/information on nutrition possibly help them to diversify their diet. This is in line with Addisu Tesfaw and his colleague study in Motta (Tefaw et al., 2018).

Food preference which is one of the new variable add in to this study was a statistically significant predictor of dietary diversity among adult on ART. Adult who had no food preference were two times more likely to diversify compared to those who had food preference for their meal. This would be due to the fact that people who prefer food will eat selectively specific foods which influence food intake and finally ends up with limited food variety and low dietary diversity. This finding also supported by Jamie Hale and Eertmans et.al reviews on food likes and dislikes on human eating behavior which clarifies food preference has a notable contribution for an individual food intake and change of dietary patterns (Hale, 2018) (Eertmans, 2001).

Moreover, household food insecurity found to be a statistically significant determinant of dietary diversity among adults on ART. Adults from food secured household had nearly four times more likely to have high diversified diet than its counterpart. Dietary diversity is an indicator for food security as the inability of households to obtain access to enough food eminently enforce to have monotonous feeding habit which compromise dietary diversity. This was in line to a study done in Jimma, Ethiopia (Tiyou et al., 2012) and in Nepal a study done among lactating mothers (Singh et al., 2020) that showed people with low dietary diversity tend to have food insecurity.

#### **4.3. Limitations and strengths of the study**

**Limitation of the study:** There are limitations that should be considered while using the results of this study. Despite the fact that the study site gives ART service for clients coming from multiple places, still the research conducted at a single site may have a limitation that may attributed to the factor related to institution. Hence, future researches shall consider multiple sites in their study.

**Strength of the study:** Data collected in non-fasting days so as to avoid the possible effect of fasting on dietary diversity of study participants.

## **5. CONCLUSION AND RECOMMENDATIONS**

### **5.1. Conclusion**

In summary, this study finding revealed that dietary diversity was unsatisfactory among adult attending Anti-retroviral treatment clinic. Moreover, self-employment status, quintiles of wealth index, last CD4 count, first line ART regimen category, adult not taking cotrimoxazole prophylaxis, having nutritional counseling in health institution, absence of food preferences, household food insecurity were found to be a statistically significant factors for individual dietary diversity of adult taking ART.

### **5.2. Recommendations**

- ★ Ministry of health, regional health bureau and health professionals working in ART clinic shall work to sustain patient's treatment on first line ART regimen category through strictly adhere to the ART guideline, strong counseling and regular support of people on ART to avoid defaulting or dropout from treatment and drug resistance.
- ★ Felege-Hiwot Comprehensive Referral hospital and health professionals working at ART clinic shall strengthened their efforts to sustain the nutritional counseling service at the ART clinic through regular updating of the staff working there, adhere the appropriate counseling approach considering the background and situation of adults on ART and using different modalities like experience sharing among people on ART, preparing model sites or simulation areas and educate them through that.
- ★ Health professionals working at ART clinic shall encourage the patients to avoid food preference for their meals unless it is a cultural/religious taboo.
- ★ Governmental or NGO aid organization shall ensure household food security of adults on ART through providing food item supports or creating jobs to jobless adults on ART.

**Bahir Dar University**

**Institute of Technology**

**Faculty of Chemical & Food Engineering**

**Department of Applied Human Nutrition**

#### **Consent form**

Greetings Dear Sir/Madam! I am \_\_\_\_\_. I am going to have an interview with you for a research study. First of all, let me describe what it is.

This is a study being carried out to assess the dietary diversity and associated factors among HIV positive adults attending ART clinic at Felege Hiwot Comprehensive Referral hospital, in Northwest Ethiopia. This study is conducted in partial fulfillment of the requirements for Master's Degree in Applied Human Nutrition in Bahir Dar University.

Your participation is totally with your voluntariness and you can stop your participation in the study at any time.

There is no risk associated with participating in this study and no direct benefits. However, it is hoped that your participation in this study will help us to gain a better understanding of your dietary diversity and some potential reasons for it.

Be assured that the **information you provide** would be used for research purposes only and would be treated as **confidential**.

**Are you willing to participate? A. Yes B. No**

**If yes continue, if no thank him/her and go to the next respondent.**

**Principal Investigator**

**Hiwot Ahmed**

**Tel: 0918-15-48-46**

**Email: hiwotahmed@gmail.com**

***Thank You!***

**Part I: Socio-demographic characteristics of adult HIV positive individuals attending ART at FHCRH**

**Instruction:** Please circle the option mentioned &/or fill in the blank space that best describe the respondent.

| No.  | Questions  | Coding categories  | Skip                |
|------|--|--|---------------------|
| 101. | Sex  | [1] Male [2]Female   |                     |
| 102. | How old are you? (in years)  | _____ years  |                     |
| 103. | Religion   | [1] Orthodox [2] Muslim [3] Protestant [4] Catholic<br>[5] Adventist [6] Other Specify) _____  |                     |
| 104. | Please describe your current residence?  | [1] Urban [ 2] Rural   |                     |
| 105. | What is the highest level of education you have attained?                          | [1] Cannot Read and Write<br>[2] Can Read and Write only<br>[3] Primary education<br>[4] Secondary education<br>[5] Certificate and above                    |                     |
| 106. | What is your marital Status?   | [1] Single<br>[2] Married<br>[3] Divorced<br>[4] Widowed   |                     |
| 107. | Occupation   | [1] Farmer<br>[2] Government employee<br>[3] Housewife<br>[4] Self employed<br>[5] Daily laborer<br>[6] Unemployed<br>[7] Student<br>[8] Other(Specify)_____ |                     |
| 108. | How many people are living in your household (Family size)?                        | _____  |                     |
| 109. | Monthly family income  | _____ Ethiopian Birr   |                     |
| 110. | Are you the head of your household?  | [1] Yes [0] No   | If Yes Skip to Q112 |
| 111. | If the answer is no for Q110, what is the occupation of the head of the household? | [1] Farmer<br>[2] Government employee<br>[3] Housewife<br>[4] Self employed<br>[5] Daily laborer<br>[6] Unemployed<br>[7] Student<br>[8] Other(Specify)_____ |                     |
| 112. | What is the main source of food for your household?                                | [1] Purchase [2] Farm/garden<br>[3] Relatives &/ or friends [4] Welfare/NGO support<br>[5] Other (Specify)_____  |                     |

**Part-II: Behavioral factors**

| S.No. | Questions                                     | Coding categories | Skip |
|-------|---|-------------------|------|
| 201.  | Do you smoke cigarettes?                      | [1] Yes [0] No    |      |
| 202.  | Do you drink alcohol?                         | [1] Yes [0] No    |      |
| 203.  | Do you chew Khat?                             | [1] Yes [0] No    |      |
| 204.  | Do you follow media (TV/radio/magazine etc.)? | [1] Yes [0] No    |      |

**Part-III: Health related Factors (to be checked from client chart + Ask)**

**Instruction: Please circle the option mentioned &/or fill in the blank space that best describe the respondent. NB: 301- 307 based on the respondent chart data review. 308-310 Ask the respondent**

| S.No. | Questions   | Coding categories  | Skip                        |
|-------|---|--|-----------------------------|
| 301.  | Does the client have any diagnosed opportunistic infection?   | [1] Yes [0] No   | If no skip to Question #303 |
| 302.  | Which opportunistic infections does the client have within one month?                                     | [1] Chronic cough<br>[2] Paralysis(any form)<br>[3] Tuberculosis<br>[4] Oral and/or esophageal thrush<br>[5] No OI<br>[6] Other (specify)_____ |                             |
| 303.  | What is the current clinical stage WHO staging of disease?  | [1] Stage –I<br>[2] Stage –II<br>[3] Stage –III<br>[4] Stage -IV   |                             |
| 304.  | What was the client’s last CD4 cell count?  | _____ Cells/mm <sup>3</sup>  |                             |
| 305.  | Does the client is on ART?  | [1] Yes [0] No   | If no skip to #308          |
| 306.  | Duration of ART treatment (in months)   | .....  |                             |
| 307.  | ART Regimen   | [1] AZT-3TC-NVP<br>[2] AZT-3TC-EFV<br>[3] TDF-3TC-NVP<br>[4] TDF-3TC-EFV<br>[5] Other/second line  |                             |
| 308.  | Does the client is on Cotrimoxazole prophylaxis?  | [1] Yes [0] No   |                             |
| 309.  | Does the client has any sign of gastro-intestinal up set (diarrhea, nausea or vomiting) within two weeks  | [1] Yes [0] No   | If no skip to que#401       |
| 310.  | If your answer is yes for Q 309, please specify which Gastro-intestinal upset the client is experiencing? | .....  |                             |

**Part-IV: Nutritional related factor**

| S.No. | Questions   | Coding categories  | Skip                   |
|-------|---|--|------------------------|
| 401.  | Have you ever had nutritional counseling at health institution?                       | [1] Yes [0] No   | If no skip to que#403  |
| 402.  | If yes for Q401, what was the nutritional counseling about?                           | [1] Drugs<br>[2] Infection/illness<br>[3] General feeding<br>[4] Others (Specify)..... |                        |
| 403.  | Have you taken ready to use therapeutic feeding (RUTF) (plumpy nut) within one month? | [1] Yes [0] No   | If no skip to que #405 |
| 404.  | If yes for Q403, are you taking on daily basis?                                       | [1] Yes [0] No   |                        |
| 405.  | Have you ever shared with other family members?                                       | [1] Yes [0] No   |                        |
| 406.  | Do you have food preferences?   | [1] Yes [0] No   |                        |
| 407.  | If, yes for Q406, please list any food that you do not eat? _____                     |  |                        |

*ART: antiretroviral therapy*

**Part-V: Dietary Diversity Questionnaire**

**Instruction: - Please describe the foods (meals and snacks) that you ate yesterday during the day and night, whether at home or outside the home. Start with the first food eaten in the morning.**

**Table 1. 24 hour dietary recall tool**

*Write down all food and drinks mentioned by the respondent. When the respondent has finished, probe for meals and snacks not mentioned.*

| <b>Breakfast<br/>6:00AM-10:00AM</b> | <b>Snack</b> | <b>Lunch<br/>12:00PM-4:00PM</b> | <b>Snack</b> | <b>Dinner<br/>8:00PM-<br/>6:00AM</b> | <b>Snack</b> |
|-------------------------------------|--------------|---------------------------------|--------------|--------------------------------------|--------------|
|                                     |              |                                 |              |                                      |              |

**Table 2. 24 hour dietary recall-Dietary diversity score tool**

When the respondent recall is complete, fill in the food groups based on the information recorded above. For any food groups not mentioned, ask the respondent if a food item from this group was consumed.

Read the list of foods, mark one in the box if the food in question was eaten and mark a zero in the box if the food was not eaten.

| Question no. | Food group   | Examples  | [1] YES | [0] NO |
|--------------|--|---|---------|--------|
| 501.         | <b>Starchy Staples Foods</b><br><i>(combination of Cereals and White roots and tubers)</i> | Corn/maize, rice, wheat, sorghum, millet, potato or any other grains or foods made from these (e.g. bread, noodles, porridge or other grain products) + <i>insert local foods e.g. porridge or pastes or other locally available grains</i> | [1] YES | [0] NO |
| 502.         | <b>Dark Green Leafy Vegetables</b>   | dark green/leafy vegetables, including wild ones + <i>locally available vitamin-A rich leaves such as amaranth, cassava leaves, kale, spinach etc Broccoli, cabbage, Lettuce.</i>   | [1] YES | [0] NO |
| 503.         | <b>Other vitamin A rich fruits and vegetables</b>  | Pumpkin, carrots, ripe mangoes ripe papaya<br><i>other locally available vitamin-A rich vegetables &amp; fruits</i>   | [1] YES | [0] NO |
| 504.         | <b>Other Fruits &amp; Vegetables</b>   | Other vegetables (e.g. tomato, onion, eggplant), including wild vegetables + other fruits, including wild fruits  | [1] YES | [0] NO |
| 505.         | <b>Organ Meat</b>  | Liver, kidney, heart or other organ meats   | [1] YES | [0] NO |
| 506.         | <b>Meat and fish</b>   | Beef, lamb, goat, chicken, or other birds (guinea hen)  | [1] YES | [0] NO |
| 507.         | <b>Eggs</b>  | Chicken, guinea hen or any other egg  | [1] YES | [0] NO |
| 508.         | <b>Legumes, Nuts and Seeds</b>   | beans, peas, lentils, nuts, seeds or foods made from these  | [1] YES | [0] NO |
| 509.         | <b>Milk and Milk Products</b>  | milk, cheese, yogurt or other milk products   | [1] YES | [0] NO |

510. Did you eat anything (meal or snack) outside the home yesterday? [1] YES [0] NO

## Part VI. Household Food Insecurity Measurement Tool

| S.NO  | QUESTION  | RESPONSE OPTIONS   |
|-------|---|--|
| 601.  | In the past four weeks, did you <b>worry</b> that your household would not have enough food?  | 0 = No (skip to Q702)<br>1=Yes   |
| 601.1 | How often did this happen?  | 1= Rarely (once or twice in the past four weeks)<br>2= Sometimes (three to ten times in the past four weeks)<br>3=Often (more than ten times in the past four weeks)     |
| 602.  | In the past four weeks, were you or any household member not able to eat the kinds of foods you <b>preferred</b> because of a lack of resources?  | 0 = No (skip to Q703)<br>1=Yes   |
| 602.1 | How often did this happen?  | 1= Rarely (once or twice in the past four weeks)<br>2= Sometimes (three to ten times in the past four weeks)<br>3=Often (more than ten times in the past four weeks)     |
| 603.  | In the past four weeks, did you or any household member have to <b>eat a limited variety of foods</b> due to a lack of resources?   | 0 = No (skip to Q704)<br>1 = Yes   |
| 603.1 | How often did this happen?  | 1 = Rarely (once or twice in the past four weeks)<br>2 = Sometimes (three to ten times in the past four weeks)<br>3 = Often (more than ten times in the past four weeks) |
| 604.  | In the past four weeks, did you or any household member have to <b>eat some foods that you really did not want to eat</b> because of a lack of resources to obtain other types of food? | 0 = No (skip to Q705)<br>1 = Yes   |
| 604.1 | How often did this happen?  | 1 = Rarely (once or twice in the past four weeks)<br>2 = Sometimes (three to ten times in the past four weeks)<br>3 = Often (more than ten times in the past four weeks) |
| 605.  | In the past four weeks, did you or any household member have to eat a <b>smaller meal</b> than you felt you needed because there was not enough food?                                   | 0 = No (skip to Q706)<br>1 = Yes   |
| 605.1 | How often did this happen?  | 1 = Rarely (once or twice in the past four weeks)<br>2 = Sometimes (three to ten times in the past four weeks)<br>3 = Often (more than ten times in the past four weeks) |
| 606.  | In the past four weeks, did you or any other household member have to eat <b>fewer meals in a day</b> because there was not enough food?  | 0 = No (skip to Q707)<br>1 = Yes   |
| 606.1 | How often did this happen?  | 1 = Rarely (once or twice in the past four weeks)<br>2 = Sometimes (three to ten times in the past four weeks)<br>3 = Often (more than ten times in the past four weeks) |

| S.NO  | QUESTION   | RESPONSE OPTIONS   |
|-------|--|--|
| 607.  | In the past four weeks, was there ever no food to eat of any kind in your household because of lack of resources to get food?                      | 0 = No (skip to Q708)<br>1 = Yes   |
| 607.1 | How often did this happen?   | 1 = Rarely (once or twice in the past four weeks)<br>2 = Sometimes (three to ten times in the past four weeks)<br>3 = Often (more than ten times in the past four weeks) |
| 608.  | In the past four weeks, did you or any household member go <b>to sleep at night hungry</b> because there was <b>not enough food</b> ?              | 0 = No (skip to Q709)<br>1 = Yes   |
| 608.1 | How often did this happen?   | 1 = Rarely (once or twice in the past four weeks)<br>2 = Sometimes (three to ten times in the past four weeks)<br>3 = Often (more than ten times in the past four weeks) |
| 609.  | In the past four weeks, did you or any household member go a <b>whole day and night without eating anything</b> because there was not enough food? | 0 = No (questionnaire is finished)<br>1 = Yes  |
| 609.1 | How often did this happen?   | 1 = Rarely (once or twice in the past four weeks)<br>2 = Sometimes (three to ten times in the past four weeks)<br>3 = Often (more than ten times in the past four weeks) |

### Part VII: Household Income and wealth index questions

| 700 | Ask the household if they have any of the following livestock assets                                    | Do you have these animals? |        | How many of these animals do this household currently own? |
|-----|---|----------------------------|--------|--|
|     | 1. Plough oxen  | [1] Yes                    | 0 [No] |  |
|     | 2. Fattened ox  | [1] Yes                    | 0 [No] |  |
|     | 3. Cows   | [1] Yes                    | 0 [No] |  |
|     | 4. Heifer   | [1] Yes                    | 0 [No] |  |
|     | 5. Bull   | [1] Yes                    | 0 [No] |  |
|     | 6. Calf   | [1] Yes                    | 0 [No] |  |
|     | 7. Goats  | [1] Yes                    | 0 [No] |  |
|     | 8. Sheep  | [1] Yes                    | 0 [No] |  |
|     | 9. Donkey   | [1] Yes                    | 0 [No] |  |
|     | 10. Mule  | [1] Yes                    | 0 [No] |  |
|     | 11. Horse   | [1] Yes                    | 0 [No] |  |
|     | 12. Chicken   | [1] Yes                    | 0 [No] |  |
|     | 13. Beehive   | [1] Yes                    | 0 [No] |  |
|     | 14. Others specify)   |                            |        |  |
| 701 | Ask the household if they have any of the following crop productions produced in the previous last year |                            |        | If yes how much the amount in quintals                     |
| 1   | Teff  | [1] Yes                    | 0 [No] |  |

|     |   |                        |        |                      |
|-----|---|------------------------|--------|----------------------|
| 2   | Barley                                      | [1] Yes                | 0 [No] |                      |
| 3   | Wheat                                       | [1] Yes                | 0 [No] |                      |
| 4   | Maize                                       | [1] Yes                | 0 [No] |                      |
| 5   | Sorghum                                     | [1] Yes                | 0 [No] |                      |
| 6   | Oats  | [1] Yes                | 0 [No] |                      |
| 7   | Bean  | [1] Yes                | 0 [No] |                      |
| 8   | Pea   | [1] Yes                | 0 [No] |                      |
| 9   | Chickpea                                    | [1] Yes                | 0 [No] |                      |
| 10  | Lentil                                      | [1] Yes                | 0 [No] |                      |
| 11  | Soya bean                                   | [1] Yes                | 0 [No] |                      |
| 12  | Gibto                                       | [1] Yes                | 0 [No] |                      |
| 13  | Groundnuts                                  | [1] Yes                | 0 [No] |                      |
| 14  | Carrot                                      | [1] Yes                | 0 [No] |                      |
| 15  | Red onion                                   | [1] Yes                | 0 [No] |                      |
| 16  | White onion                                 | [1] Yes                | 0 [No] |                      |
| 17  | Potatoes                                    | [1] Yes                | 0 [No] |                      |
| 18  | Head Cabbage                                | [1] Yes                | 0 [No] |                      |
| 19  | Tomatoes                                    | [1] Yes                | 0 [No] |                      |
| 20  | Avocado                                     | [1] Yes                | 0 [No] |                      |
| 21  | Lemon                                       | [1] Yes                | 0 [No] |                      |
| 22  | Zeytun                                      | [1] Yes                | 0 [No] |                      |
| 23  | Mango                                       | [1] Yes                | 0 [No] |                      |
| 24  | Orange                                      | [1] Yes                | 0 [No] |                      |
| 25  | Papaya                                      | [1] Yes                | 0 [No] |                      |
| 26  | Peper corn                                  | [1] Yes                | 0 [No] |                      |
| 27  | Geisho                                      | [1] Yes                | 0 [No] |                      |
| 28  | Sugar cane                                  | [1] Yes                | 0 [No] |                      |
| 29  | Coffee                                      | [1] Yes                | 0 [No] |                      |
| 30  | Khat  | [1] Yes                | 0 [No] |                      |
| 31  | Others                                      |                        |        |                      |
| 702 | Does your household have?                   |                        |        | How much the number? |
| 1   | Functioning radio/tape                      | [1] Yes                | 0 [No] |                      |
| 2   | Modern beds                                 | [1] Yes                | 0 [No] |                      |
| 3   | Cotton/sponge/spring mattress?              | [1] Yes                | 0 [No] |                      |
| 4   | Mobile/cell-phone/wireless                  | [1] Yes                | 0 [No] |                      |
| 5   | Water pump                                  | [1] Yes                | 0 [No] |                      |
| 6   | Modern stoves                               | [1] Yes                | 0 [No] |                      |
| 7   | Other (specify)                             |                        |        |                      |
| 703 | What kind of latrine does your family have? | 1. None                |        |                      |
|     |   | 2. VIP                 |        |                      |
|     |   | 3. Traditional latrine |        |                      |
|     |   | 4. Flash (water)       |        |                      |
|     |   | 3. Other (specify)     |        |                      |
| 704 | What is the type of roof of the house?      | 1. Corrugated sheet    |        |                      |
|     |   | 2. Thatch roof         |        |                      |
|     |   | 3. Other               |        |                      |

|     |  |                        |        |  |
|-----|--|------------------------|--------|--|
| 705 | How many rooms are used by this household for sleeping only?           | Number of rooms _____  |        |  |
| 706 | Do you have kitchen  | [1] Yes                | 0 [No] |  |
| 707 | Do you have separate rooms for cattle?                                 | [1] Yes                | 0 [No] |  |
| 708 | What is the wall of your residence house made of?                      | 1. Wooden structure    |        |  |

*RUTF: ready-to-use therapeutic food.*

**ክፍል 5:- ከግለሰቡ የአመጋገብ ስብጥር ጋር የተዛመዱ ባህርያት መጠይቅ**

**መመሪያ:-** የጥናቱ ተሳታፊ ቤት ውስጥ ወይም ከቤታቸው ውጭ ትናንትና ቀን እና ማታ የተመገቧቸውን ምግቦችን (ምግቦች፣ ተጨማሪ እና መክሰስ) እንዲሁም የጠጡትን ከጠዋት ጀምረው በዝርዝር እንዲነገሩዎት ይጠይቁ።

**ሠንጠረዥ 1:** የ24 ሰዓታት የአመጋገብ ስብጥር መመዘገቢያ

እባክዎን ትናንትና (ባለፉት 24 ሰዓታት-ውስጥ) ቀን እና ማታ ቤት ውስጥ ወይም ከቤት ውጭ የተመገቧቸውን ምግቦችና የጠጡትን ይጥቀሱልኝ

መጀመሪያ በጠዋት የበሉ፣ የጠጡትን በመጥቀስ ይጀምሩ።

የጥናቱ ተሳታፊ የጠቀሱትን ሁሉን ምግብ እና መጠጥ በክፍት ቦታው ላይ ይጻፉ። የተለያዩ ምግቦች ቅይጥ ሲጠቅሱ፣

የተቀየጠውን/የተደባለቀውን በአይነት/በዝርዝር እንዲነገሩዎት ይጠይቁ። የጥናቱ ተሳታፊው ዘርዝረው ሲያጠናቅቁ

መክሰስ/ተጨማሪና ያለተጠቀሱትን ይጠይቁ።

| ቁርስ<br>ከጧቱ 12:00-4:00 ሰዓት | Snack (ተጨማሪ<br>በቁርስና ምሳ<br>መካከል) | ምሳ<br>ከቀኑ 6:00-10:00<br>ሰዓት | መክሰስ | እራት<br>ከምሽቱ 2:00-6:00 | Snack (ተጨማሪ<br>ከእራት በኋላ) |
|---------------------------|----------------------------------|-----------------------------|------|-----------------------|--------------------------|
|                           |                                  |                             |      |                       |                          |

**ሠንጠረዥ-2: የ24 ሰዓታት የአመጋገብ ስብጥር መለኪያ**

የጥናቱ ተሳታፊ አስታውሰው ሲጠናቀቁ፤ ከላይ በተጠቀሰው መረጃ መሰረት የምግብ መደቡን ይሙሉ። ካልተጠቀሱ የምግብ መደቦች የተዘረዘሩትን የምግብ አይነት ምላሽ ሰጪውን ተመግበው ከሆነ ይጠቁ።

ከዚህ ስር የተዘረዘሩትን የምግብ መደቦች ምላሽ ሰጪውን በልተው ከሆነ “1” ቁጥርን ያክብቡ ካልበሉት ደግሞ “0”ን ያክብቡ

| ተ.ቁ  | የምግብ መደብ  | የምግብ አይነት  | አዎ [1] | የለም [0] |
|------|---|--|--------|---------|
| 501. | አዝርዕት እና ማንኛውም ከአዝርዕት የተጋጀ ምግብ ወይም ድንች እና ነጭ የሥራ ስር ምግብ | በቆሎ፣ ሩዝ፣ ስንዴ፣ ማሽላ፣ ዳጉሳ፣ ድንች፣ ስኳር ድንች፣ ወይም ሌላ የጥራጥሬ ውጤት ከጤፍ፣ ከማሽላ ከዳጉሳ፣ ከበቆሎ፣ ከሩዝ የተዘጋጀ ምግብ ለምሳሌ እንጀራ፣ ዳቦ፣ ቁጣ፣ ገንፎ፣ ብስኩት ወዘተ. | አዎ [1] | የለም [0] |
| 502. | ጠቆር ያሉ አረንጓዴ ቅጠላቅጠሎች                                    | የሀበሻ ጎመን፣ ቆስጣ፣ ብሮኮሊ፣ ጥቅል ጎመን፣ ሰላጣ፣ ስፒናች  | አዎ [1] | የለም [0] |
| 503. | ቫይታሚን ኤ ያላቸው ቅጠላቅጠሎችና ፍራፍሬዎች                            | ዱባ፣ ካሮት፣ የበሰለ ማንጎ፣ የበሰለ ፓፓያ፣ ባለቀይ ቀለም ጣፋጭ ቃሪያ  | አዎ [1] | የለም [0] |
| 504. | ሌሎች ፍራፍሬና ቅጠላ ቅጠሎች                                      | ቲማቲም፣ ሽንኩርት፣ የዱርቅጠላቅጠሎች እና ፍራፍሬዎች  | አዎ [1] | የለም [0] |
| 505. | Organ meat (የክፍለ-አካል ሥጋ)                                | ዱለት (ጨንፈ)፣ የጉብት፣ ኩላሊት፣ ልብ ወይም ሌሎች የሰውነት ክፍል  | አዎ [1] | የለም [0] |
| 506. | ሥጋ እና/ ዓሣ   | የከብት፣ የበግ፣ የፍየል፣ የዶሮ፣ ቆቅ፣ ገርግራ ወይም ሌሎች። ትኩስ ወይም ደረቅ ዓሣ   | አዎ [1] | የለም [0] |
| 507. | እቁላል  | የዶሮ፣ የቆቅ፣ የገርግራ  | አዎ [1] | የለም [0] |
| 508. | ጥራጥሬ ለውዝ  | ባቁላ፣ አተር፣ ምስር፣ ለውዝ፣ አኩራ-አተር ወይም ከነዚህ የተዘጋጀ ምግብ   | አዎ [1] | የለም [0] |
| 509. | ወተት እና የወተት ውጤቶች  | ወተት፣ አይብ፣ እርጎ እና ሌሎች የወተት ተዋዕኔዎች   | አዎ [1] | የለም [0] |

510. ትላንትና ከቤት ውጭ ማንኛውንም ነገር (ምግብ ወይም ተጨማሪ/መክሰስ) በልተዋል? አዎ [1] [0] የለም

**ክፍል 6. የቤተሰብ ምግብ ዋስትናን በተመለከተ**

| ተ.ቁ   | ጥያቄ   | ምላሽ   |
|-------|---|---|

\*Merge FAC1\_1 and FACT2\_1 in to a new variable common\_wisur [common wealth index score]

\* Then using Transform → Rank Cases create a quintile [five categories] of wealth index and label 1= Lowest quintile, 2=Second quintile, 3=Middle quintile, 4=Fourth quintile and 5= Highest quintile.
